

PMA2015/KINSHASA-R3 SOI (EN)

SNAPSHOT OF INDICATORS

Summary of the sample design for PMA2015/Kinshasa, DRC-R3:

PMA2015/Kinshasa Round 3 used a two-stage cluster design to draw a representative urban sample. A sample of 58 enumeration areas (EAs) was drawn (probability proportional to size) from the total of approximately 350 in Kinshasa. For each EA, 30 households were selected, and a random start method was used to systematically select households. All women of reproductive age (15-49) within each selected household were contacted and consented for interviews. Up to six health service delivery points (SDP) were selected in each EA.

The table below provides a summary of key family planning indicators and their breakdown by background characteristics. To view the breakdown by background characteristics of the respondents (including education level, wealth quintile, region etc.), please click on the respective indicator link.

PMA2020 Standard	F	Round 3			
Family Planning Indicators	All Women	Mar Wor			
Utilization Indicators:					
Contraceptive Use (click to see background characteristics)					
Contraceptive Prevalence Rate (CPR)	34.3	42	.3		
Modern Contraceptive Prevalence (mCPR)	17.0	20	0.4		
Contraceptive Method Mix (by background characteristics)					
Contraceptive method mix (pie charts for married and all women)					
Number of modern contraceptive users (count of users in the sample)	937	51	2		
Demand Indicators:					
Unmet need for family planning (for spacing, limiting, and in total)	20.1	31.3		
Total Contraceptive Demand (CPR & Unmet Need)		54.4	73.7		
Percent of all/married women with demand satisfied by modern contraception		31.2	27.6		
Percent of recent births unintended (wanted later/wanted no mor	<u>re)</u>				
Wanted Then		42.3	49.1		
Wanted Later		45.2	40.5		
Not At All		12.5	10.4		
Indicators for Access, Equity, Quality & Choice:					
Percent of users who chose their current method by themselves with a partner/provider	or jointly	87.6	89.5		
Percent of users who paid for family planning services	49.0	47.1			
Method Information Index:					
Percent of recent/current users who were informed about other me	ethods	36.2	48.1		
Percent of recent/current users who were informed about side effe	ects	37.7	45.5		

Percent of recent/current users who were told what to do if they experienced side effects	78.0	83.7
Percent of recent/current users who would return and/or refer others to their provider	59.3	65.2
Percent of all/married women receiving family planning information in the past 12 months	6.9	7.7
Fertility Indicators:		
Total Fertility Rate (TFR)	4.4	
Adolescent fertility rate (per 1,000 females age 15-19)	74.2	
Service Delivery Point Indicators		
Percentage of service delivery points that offer different contraceptive methods, by type of contraceptive method		
Percentage of service delivery points stocked out of modern contraceptives in the past 3 months, by method		
Number of family planning visits (new and continuing) in last month, by method		
Percent of service delivery points charging fees for family planning services		
Percent of service delivery points offering 3 or 5 methods of contraception		

Contraceptive choice

Percent distribution of women ages 15 to 49 who used contraception in the past 12 months reporting on who decided on the contraceptive method, by background characteristics

Background characteristics	Self	Jointly with partner or provider	Provider alone/ partner alone/other	Total
